

Thru.®

Why Thru

Cloud-Native Managed File Transfer

A managed file transfer as a service (MFTaaS) started in the cloud and continues to provide cloud-based automated file transfer and ad hoc file sharing capabilities to businesses.

No deployment

Leading to faster time to value

API-centric

Resulting in a modern architecture for a connected IT landscape

Usage-based pricing

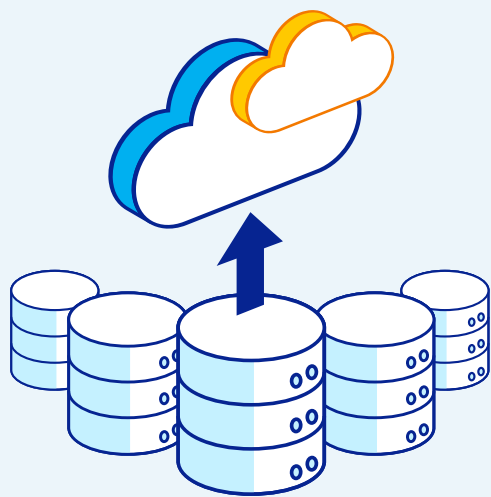

Enable more efficient use of budget

Thru.®

Solve Your File Transfer Problems

Reduce Costs

Reduce operational and infrastructure costs by using MFT as a service. Leave infrastructure operations, scaling, availability and updates to us.

Protect Data

Security measures are built into every layer, including authentication, antivirus scanning and end-to-end encryption (E2EE) in transit and at rest.

Connect Faster

Complete workflows faster with native integration connectors for MuleSoft, Boomi, Amazon S3 and more.

Migrate to Cloud

Use available APIs to reduce on-premises migration efforts.

Remain Compliant

Satisfy data management standards with encryption, identity access controls, auditing, retention and additional tools to help remain compliant with GDPR, PCI DSS, HIPAA and SOC 2.
